Across Key Geographies**

Case Study

Benchmarking Healthcare Delivery Systems across Key Geographies

About the Client

- An independent assurance and advisory body mandated to oversee transparency and accountability in working of the Abu Dhabi government and other public entities

Client Objectives / Goals

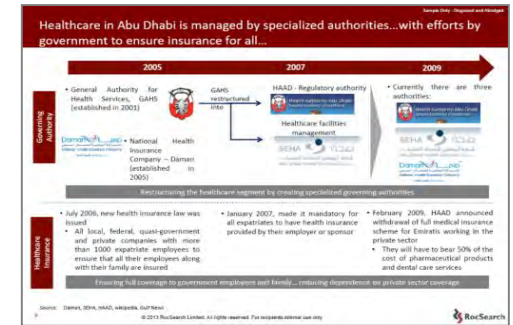

- The client wanted to revamp the existing healthcare delivery system in Abu Dhabi
- They wanted RocSearch to evaluate the healthcare delivery systems in key global geographies, such as US, Europe and Singapore, looking at the best practices followed and to benchmark its impact

Approach and Methodology

- The team analysed the various healthcare systems in the desired geographies, covering their key characteristics, relative advantages and disadvantages
- They also looked at private participation trends in these countries, highlighting the inherent drivers and challenges
- Finally, the team benchmarked the existing healthcare system in Abu Dhabi vis-à-vis the other global healthcare systems studied, and proposed appropriate recommendations

Sample Output

Results / Value-add

The client devised customised policies to improve the existing framework in their country based on our assessment

The study helped the client develop an understanding of the global best practices
